Group rules!

No using generative AI – writing project or code

Use reliable sources and cite them properly – we don't want to plagiarise here!

Delegate tasks evenly – listen to people if they say they're better or worse at certain tasks but don't put everything on one person

Document all tasks – comment code, provide good changeset comments on GitHub etc.
Communicate which tasks you intend to work on – avoid duplication of work
Use descriptive filenames when sharing files – avoid Document1.docx, test_20250305.c or similar – this makes things easy to find

**under construction!!! / / /
